

Test Systems & Inspection Systems

Test Systems & Inspection Systems

Quality assurance from a single source.

Test systems and inspection systems form an integral part of most of the automated solutions we employ. Each assembly process is usually followed by an inspection process so that the **highest quality requirements can be satisfied**. Both laboratory as well as stand alone or inline series inspection systems (EOL) have already been widely implemented by ruhlamat.

Inspection results (product/process data) are documented in **individual or customer-specific databases (traceability)**.

Advantages:

- Seamless traceability of product and process data
- Inline process control and monitoring
- Efficiency through timely trend control
- 100% inspection
